Vascular Sonography

The purpose of continuing qualifications requirements (CQR) is to assist registered technologists in documenting their continued qualifications in the disciplines of certification and registration held. To accomplish this purpose the continuing qualifications requirements are presented in three parts: the professional profile, the structured self assessment (SSA) and continuing education (CE).

The purpose of the CQR SSA is to assist registered technologists identify gaps in the knowledge and cognitive skills underlying the intelligent performance of the tasks typically required for practice within the disciplines of certification and registration held and help direct their professional development efforts.

The Structured Self Assessment Content Specifications for Vascular Sonography is provided to assist vascular sonographers during their CQR compliance period. Its purpose is to prepare vascular sonographers for the SSA and to help education providers develop coursework for the vascular sonographers who need to address specified areas with targeted continuing education. Targeted CE is assigned only if a standard is not met in a category on the SSA.

The SSA is composed of sets of questions that are designed to evaluate an individual’s knowledge in topics related to current practice. Participants have a maximum of 1 hour and 20 minutes to complete the SSA. Please allow an additional 8 minutes for the tutorial, two minutes for the non-disclosure agreement (NDA), and 10 minutes for a follow-up survey.

The table below presents the major categories and subcategories covered on the SSA. The number of questions in each category are listed in bold and number of questions in each subcategory in parentheses. The potential number of targeted CE credits that would be prescribed if the standard is not met, are across from each subcategory, with the maximum amount listed at the bottom. Specific topics within each category are addressed in the content outline, which makes up the remaining pages of this document.

Patient Care

1. Patient Interactions and Management
   A. Ethical and Legal Aspects
      1. patient’s rights
         a. informed consent
            (*e.g., written, oral, implied)
         b. confidentiality (HIPAA)
         c. American Hospital Association
            (AHA) Patient Care Partnership
            (Patients’ Bill of Rights)
            1. privacy
            2. extent of care (e.g., DNR)
            3. access to information
            4. living will, health care proxy, advance directive
            5. research participation
      2. legal issues
         a. verification (e.g., patient
            identification, compare order to
            clinical indication, exam coding)
         b. common terminology (e.g., battery,
            negligence, malpractice, beneficence)
         c. legal doctrines (e.g., respondeat
            superior, res ipsa loquitur)
         d. restraints versus immobilization
      3. ARRT Standards of Ethics
   B. Interpersonal Communication
      1. modes of communication
         a. verbal/written
         b. nonverbal (e.g., eye contact, touching)
      2. challenges in communication
         a. interactions with others
            1. language barriers
            2. cultural and social factors
            3. physical and sensory impairments
            4. age
            5. emotional status, acceptance of condition
         b. explanation of medical terms
         c. strategies to improve understanding
      3. patient education
         a. explanation of current procedure
            (e.g., risks, benefits)
         b. pre- and post-examination
            instructions (e.g., preparations,
            diet, medications, discharge instructions)
         c. respond to inquiries about other
            imaging modalities (e.g., CT, MRI,
            mammography, radiography, bone densitometry)
   C. Physical Assistance and Monitoring
      1. patient transfer and movement
         a. body mechanics (e.g., balance,
            alignment, movement)
         b. patient transfer techniques
      2. assisting patients with medical equipment
         a. infusion catheters and pumps
         b. oxygen delivery systems
         c. other (e.g., nasogastric tubes,
            urinary catheters)
      3. routine monitoring
         a. vital signs
         b. physical signs and symptoms
            (e.g., motor control, severity of injury)
         c. fall prevention
         d. documentation
      4. operator ergonomics
   D. Medical Emergencies
      1. allergic reactions
         (e.g., contrast, latex)
      2. cardiac/respiratory arrest
         (e.g., CPR)
      3. physical injury or trauma
      4. other medical disorders (e.g.,
         seizures, diabetic reactions)

* The abbreviation “e.g.,” is used to indicate that examples are listed in parenthesis, but that it is not a complete list of all possibilities.

(Patient Care continues on the following page)
Patient Care (continued)

E. Infection Control
   1. chain of infection (cycle of infection)
      a. pathogen
      b. reservoir
      c. portal of exit
      d. mode of transmission
         1. direct
            a. droplet
            b. direct contact
         2. indirect
            a. airborne
            b. vehicle-borne (fomite)
            c. vector-borne (mechanical or biological)
      e. portal of entry
      f. susceptible host

   2. asepsis
      a. equipment disinfection
      b. equipment sterilization
      c. medical aseptic technique
      d. sterile technique
      e. proper gel handling

   3. CDC Standard Precautions
      a. hand hygiene
      b. use of personal protective equipment (e.g., gloves, gowns, masks)
      c. safe handling of contaminated equipment/surfaces
      d. disposal of contaminated materials
         1. linens
         2. needles
         3. patient supplies
         4. blood and body fluids

   4. transmission-based precautions
      a. contact
      b. droplet
      c. airborne

   5. additional precautions
      a. neutropenic precautions (reverse isolation)
      b. healthcare associated (nosocomial) infections

F. Patient Monitoring and Safety
   1. ultrasound bioeffects and safety
   2. pressure and intensity measurement
      a. thermal index (e.g., soft tissue, bone)
      b. mechanical index
   3. research on biological effects
   4. AIUM recommendations

G. Interventional Procedures
   1. patient preparation
   2. time-out
   3. informed consent
   4. sterile technique
   5. follow-up instructions
Image Production

1. Basic Principles of Ultrasound
   A. Generation of Signal
      1. transducers
         a. construction and properties
            1. crystal thickness, wavelength
            2. frequency spectrum, resonance
            3. damping
         b. operation
            1. focusing
            2. beam diameter
            3. piezoelectric effect
         c. types
      2. beam configuration
         a. near and far field
         b. focal zone
         c. beam profile
      3. pulse characteristics
         a. pulse repetition frequency
         b. pulse repetition period
         c. spatial pulse length
         d. duty factor
         e. frequency
         f. resolution
            1. axial
            2. lateral
            3. temporal
            4. elevational
            5. contrast
   B. Machine and Transducer Use
      1. selection
      2. care
      3. malfunctions
   C. ABI/Pulse Volume Recording Equipment
      1. cuff selection
      2. treadmill

   4. technical factors
      a. frequency, bandwidth, Q factor
      b. power
      c. pressure
      d. intensity
      e. amplitude
   5. modes
      a. B-mode
      b. Doppler
         1. color
         2. spectral
            a. pulse wave Doppler
            b. continuous wave Doppler
      3. power/energy

(Image Production continues on the following page)
2. Image Formation

A. Technical Factors for Diagnostic Quality Images
   1. power
   2. focal zone
   3. depth
   4. compensation/TGC
   5. gain
   6. frame rate
   7. Doppler gain
   8. Doppler angle
   9. gate (sample volume) size/placement
   10. wall filter
   11. scale
   12. color box (size and steering)
   13. dynamic range
   14. line density
   15. spectral baseline
   16. harmonics
   17. spatial compounding

B. Beam Interactions
   1. speed of sound in soft tissue
      a. density
      b. stiffness
   2. time and distance (range equation)
   3. acoustic impedance
   4. normal and oblique incidence
   5. reflection
   6. transmitted/refracted waves
   7. intensity
   8. scattering
   9. absorption and attenuation

C. Detection and Display of Echoes
   1. receiver
   2. amplitude
   3. dynamic range and compression
   4. analog-to-digital converter (ADC)
   5. digital-to-analog converter (DAC)
   6. brightness
   7. contrast
   8. post-processing (e.g., smoothing, edge enhancement, filtering, read magnification)
   9. panoramic imaging

D. Bioeffects
   1. thermal
   2. mechanical (e.g., cavitation)
   3. output measures (e.g., MI, TIS, TIC, TIB, SPTA)
   4. ALARA

E. Measurements from Spectral Analysis
   1. peak systolic velocity (PSV)
   2. end diastolic velocity (EDV)
   3. resistive index (RI)/pulsatility index (PI)
   4. measure of systolic acceleration
      a. acceleration time (AT)
      b. acceleration index (AI)
      c. tardus parvus waveform
   5. volume flow (e.g., hemodialysis fistulas)

(Image Production continues on the following page)
Image Production (continued)

3. Evaluation and Selection of Representative Images

A. Criteria for Diagnostic Quality
   1. proper demonstration of anatomical structures
   2. proper demonstration of pathological conditions
   3. artifacts
      a. gray scale (e.g., reverberation, mirror image, shadowing, posterior enhancement, comet tail)
      b. Doppler (e.g., aliasing, twinkling, mirror image)
   4. improvement of suboptimal images

B. Image Archiving

C. Color and Spectral Analysis
   1. direction of flow
   2. presence or absence of flow
   3. differentiation of normal and abnormal spectral waveforms

D. Arterial and Venous Hemodynamics
   1. flow patterns (e.g., turbulence, phasicity)
   2. pressure
   3. velocity
   4. peripheral vascular resistance
   5. wall compliance
Procedures

TYPE OF EXAM

1. Abdominal/Pelvic Vasculature
   A. Arterial
      1. aorta
      2. celiac
      3. hepatic
      4. splenic
      5. superior mesenteric/inferior mesenteric
      6. renal
      7. common iliac
      8. internal iliac
      9. external iliac
   B. Venous
      1. inferior vena cava
      2. hepatic
      3. portal
      4. splenic
      5. superior mesenteric
      6. renal
      7. pelvic varices
      8. common iliac
      9. internal iliac
     10. external iliac
   C. Transplant
      1. liver
      2. kidney(s)

FOCUS OF QUESTIONS

Practice Parameters (e.g., AIUM, ACR, IAC)
• clinical indications
• patient preparation
• patient positioning
• instrumentation (e.g., transducer, stand-off pads)
• technical factors
• evaluation and documentation of visualized anatomy
• optimizing image quality
• image annotation

Anatomy and Physiology
• normal
• normal variant
• abnormal
• measurements

Abnormalities
• pathology
• congenital anomalies
• lab values
• differential diagnosis

Doppler Applications/Blood Flow Characteristics
• normal
• normal variant
• abnormal
• measurements

(Procedures continues on the following page.)
Procedures (continued)

TYPE OF EXAM

2. Arterial Peripheral Vasculature
   A. Upper Extremity
      1. brachiocephalic
      2. subclavian
      3. axillary
      4. brachial
      5. radial
      6. ulnar
      7. palmar arch (including Allen test)
   B. Lower Extremity
      1. external iliac
      2. common femoral
      3. superficial femoral
      4. deep femoral
      5. popliteal
      6. tibioperoneal trunk
      7. posterior tibial
      8. anterior tibial
      9. peroneal
      10. dorsalis pedis
   C. Stress/Pressure Testing
      1. PVR (pulse volume recording)
      2. segmental pressures (upper extremities)
      3. segmental pressures (lower extremities)
      4. ABI (ankle brachial index)
      5. post-exercise testing
      6. photoplethysmography (PPG)
      7. toe-brachial index (TBI)

FOCUS OF QUESTIONS

Practice Parameters (e.g., AIUM, ACR, IAC)
   • clinical indications
   • patient preparation
   • patient positioning

Procedures (continued)

**TYPE OF EXAM**

3. Venous Peripheral Vasculature
   A. Upper Extremity Venous
      1. internal jugular
      2. brachiopheallic
      3. subclavian
      4. axillary
      5. brachial
      6. cephalic
      7. basilic
      8. radial
      9. ulnar
   B. Lower Extremity Venous
      1. external iliac
      2. common femoral
      3. femoral
      4. deep femoral
      5. popliteal
      6. great saphenous
      7. small saphenous
      8. calf veins
   C. Venous Testing
      1. vein mapping (upper and lower)
      2. reflux assessment (e.g., venous insufficiency, perforators, varicose veins, valve competency)

**FOCUS OF QUESTIONS**

Practice Parameters (e.g., AIUM, ACR, IAC)
   • clinical indications
   • patient preparation
   • patient positioning
   • instrumentation (e.g., transducer, stand-off pads)
   • technical factors

Procedures (continued)

**TYPE OF EXAM**

4. **Extracranial Cerebral Vasculature and Other Sonographic Procedures**
   A. Carotid Artery (CCA, ICA, ECA)
   B. Vertebral Artery
   C. Other Sonographic Procedures
      1. bypass grafts
      2. endogafts
      3. dialysis access grafts/fistulae
      4. stents
      5. post catheterization complications
      6. IVC filters
      7. TIPS
      8. line position (e.g., PICC)
      9. post endarterectomy
      10. vein ablations
      11. pseudoaneurysm treatment (compression or guided thrombin injection)

**FOCUS OF QUESTIONS**

Practice Parameters (e.g., AIUM, ACR, IAC)
- clinical indications
- patient preparation
- patient positioning
- instrumentation (e.g., transducer, stand-off pads)
- technical factors
- evaluation and documentation of visualized anatomy
- optimizing image quality
- image annotation

Anatomy and Physiology
- normal
- normal variant
- abnormal
- measurements

Abnormalities
- pathology
- congenital anomalies
- lab values
- differential diagnosis

Doppler Applications/Blood Flow Characteristics
- normal
- normal variant
- abnormal
- measurements
