Sonography

The purpose of continuing qualifications requirements (CQR) is to assist registered technologists in documenting their continued qualifications in the disciplines of certification and registration held. To accomplish this purpose the continuing qualifications requirements are presented in three parts: the professional profile, the structured self assessment (SSA) and continuing education (CE).

The purpose of the CQR SSA is to assist registered technologists identify gaps in the knowledge and cognitive skills underlying the intelligent performance of the tasks typically required for practice within the disciplines of certification and registration held and help direct their professional development efforts.

The Structure Self Assessment Content Specifications for Sonography is provided to assist sonographers during their CQR compliance period. Its purpose is to prepare sonographers for the SSA and to help education providers develop coursework for the sonographers who need to address specified areas with targeted continuing education. Targeted CE is assigned only if a standard is not met in a category on the SSA.

The SSA is composed of sets of questions that are designed to evaluate an individual’s knowledge in topics related to current practice. Participants have a maximum of 90 minutes to complete the SSA. Please allow an additional 18 minutes for the tutorial, two minutes for the non-disclosure agreement (NDA), and 10 minutes for a follow-up survey.

The table below presents the major categories and subcategories covered on the SSA. The number of questions in each category are listed in bold and number of questions in each subcategory in parentheses. The potential number of targeted CE credits that would be prescribed if the standard is not met, are across from each subcategory, with the maximum amount listed at the bottom. Specific topics within each category are addressed in the content outline, which makes up the remaining pages of this document.

Patient Care

1. Patient Interactions and Management
   A. Ethical and Legal Aspects
      1. patient’s rights
         a. informed consent
            (*e.g., written, oral, implied)
         b. confidentiality (HIPAA)
         c. American Hospital Association (AHA)
            Patient Care Partnership (Patients’ Bill of Rights)
            1. privacy
            2. extent of care (e.g., DNR)
            3. access to information
            4. living will, health care proxy, advance directive
            5. research participation
      2. legal issues
         a. verification (e.g., patient identification, compare order to clinical indication, exam coding)
         b. common terminology (e.g., battery, negligence, malpractice, beneficence)
         c. legal doctrines (e.g., respondeat superior, res ipsa loquitur)
         d. restraints versus immobilization
      3. ARRT Standards of Ethics
   B. Interpersonal Communications
      1. modes of communication
         a. verbal/written
         b. nonverbal (e.g., eye contact, touching)
      2. challenges in communication
         a. interactions with others
            1. language barriers
            2. cultural and social factors
            3. physical and sensory impairments
            4. age
            5. emotional status, acceptance of condition
         b. explanation of medical terms
         c. strategies to improve understanding
   C. Physical Assistance and Monitoring
      1. patient transfer and movement
         a. body mechanics (balance, alignment, movement)
         b. patient transfer techniques
      2. assisting patients with medical equipment
         a. infusion catheters and pumps
         b. oxygen delivery systems
         c. other (e.g., nasogastric tubes, urinary catheters)
      3. routine monitoring
         a. vital signs
         b. physical signs and symptoms (e.g., motor control, severity of injury)
         c. fall prevention
         d. documentation
      4. operator ergonomics
         a. equipment
         b. work environment
         c. sonographer body mechanics
   D. Medical Emergencies
      1. allergic reactions (e.g., contrast, latex)
      2. cardiac/respiratory arrest (e.g., CPR)
      3. physical injury or trauma
      4. other medical disorders (e.g., seizures, diabetic reactions)

* The abbreviation “e.g.,” is used to indicate that examples are listed in parenthesis, but that it is not a complete list of all possibilities.

† Operator ergonomics is referenced in the “Industry Standards for the Prevention of Work Related Musculoskeletal Disorders in Sonography.”

(Patient Care continues on the following page.)
Patient Care (continued)

E. Infection Control
1. chain of infection (cycle of infection)
   a. pathogen
   b. reservoir
   c. portal of exit
   d. mode of transmission
      1. direct
         a. droplet
         b. direct contact
      2. indirect
         a. airborne
         b. vehicle-borne (fomite)
         c. vector-borne (mechanical or biological)
   e. portal of entry
   f. susceptible host
2. asepsis
   a. equipment disinfection
   b. equipment sterilization
   c. medical aseptic technique
   d. sterile technique
   e. proper gel handling
3. CDC Standard Precautions
   a. hand hygiene
   b. use of personal protective equipment (e.g., gloves, gowns, masks)
   c. safe handling of contaminated equipment/surfaces
   d. disposal of contaminated materials
      1. linens
      2. needles
      3. patient supplies
      4. blood and body fluids
   e. additional precautions
      a. neutropenic precautions (reverse isolation)
      b. healthcare associated (nosocomial) infections
4. transmission-based precautions
   a. contact
   b. droplet
   c. airborne
5. additional precautions
   a. neutropenic precautions (reverse isolation)
   b. healthcare associated (nosocomial) infections
F. Patient Monitoring and Safety
1. ultrasound bioeffects and safety
2. pressure and intensity measurement
   a. thermal index (e.g., soft tissue, cranium, bone)
   b. mechanical index
3. research on biological effects
4. AIUM recommendations
G. Interventional Procedures
1. patient preparation
2. time-out
3. informed consent
4. sterile technique
5. follow-up instructions
Image Production (continued)

2. Image Formation
   A. Technical Factors for Diagnostic Quality Images
      1. power
      2. focal zone
      3. depth
      4. compensation/TGC
      5. gain
      6. frame rate
      7. Doppler gain
      8. Doppler angle
      9. gate (sample volume) size/placement
     10. wall filter
     11. scale
     12. color box (size and steering)
     13. dynamic range
     14. line density
     15. spectral baseline
     16. harmonics
     17. spatial compounding
   B. Beam Interactions
      1. speed of sound in soft tissue
         a. density
         b. stiffness
      2. time and distance (range equation)
      3. acoustic impedance
      4. normal and oblique incidence
      5. reflection
      6. transmitted/refracted waves
      7. intensity
      8. scattering
      9. absorption and attenuation

   C. Detection and Display of Echoes
      1. receiver
      2. amplitude
      3. dynamic range and compression
      4. analog-to-digital converter (ADC)
      5. digital-to-analog converter (DAC)
      6. brightness
      7. contrast
      8. post-processing (e.g., smoothing, edge enhancement, filtering, read magnification)
      9. panoramic imaging
     10. write magnification
     11. 3D/4D imaging

   D. Bioeffects
      1. thermal
      2. mechanical (e.g., cavitation)
      3. output measures (e.g., MI, TIS, TIC, TIB, SPTA)
      4. ALARA

   E. Measurements from Spectral Analysis
      1. peak systolic velocity (PSV)
      2. end diastolic velocity (EDV)
      3. resistive index (RI)/pulsatility index (PI)
      4. tardus parvus waveform

(Image Production continues on the following page.)
Image Production (continued)

3. Evaluation and Selection of Representative Images

A. Criteria for Diagnostic Quality
   1. proper demonstration of anatomical structures
   2. proper demonstration of pathological conditions
   3. artifacts
      a. gray scale (e.g., reverberation, mirror image, shadowing, posterior enhancement, comet tail)
      b. Doppler (e.g., aliasing, twinkling, mirror image)
   4. improvement of suboptimal images

B. Image Archiving

C. Color and Spectral Analysis
   1. direction of flow
   2. presence or absence of flow
   3. differentiation of normal and abnormal spectral waveforms

D. Real-Time Imaging
   1. echogenicity of reflectors
   2. echotextures
Procedures

TYPE OF EXAM

1. Abdomen
   A. Abdominal and Transplant Vasculature
      1. aorta and branches
      2. inferior vena cava (IVC) and confluences
      3. portal veins and confluences
      4. kidney transplant(s)
      5. liver transplant
   B. Abdominal Organs
      1. biliary system
         a. gallbladder
         b. bile ducts (e.g., CBD, extra-hepatic)
      2. urinary tract
         a. kidneys
         b. ureters
         c. bladder
      3. spleen
      4. pancreas
      5. liver
      6. other
         a. lymph nodes
         b. adrenal glands
         c. gastrointestinal tract (e.g., appendix)
         d. hernia
         e. prostate
         f. peritoneal cavity

FOCUS OF QUESTIONS

Practice Guidelines (e.g., AIUM, ACR)
- clinical indications
- patient preparation
- patient positioning
- instrumentation (e.g., transducer, stand-off pads)
- technical factors
- evaluation and documentation of visualized anatomy
- optimizing image quality

Anatomy and Physiology
- normal
- normal variant
- abnormal
- measurements

Abnormalities
- pathology
- congenital anomalies
- lab values
- differential diagnosis

Doppler Applications/Blood Flow Characteristics
- normal
- normal variant
- abnormal
- measurements

(Procedures continues on the following page.)
Procedures (continued)

**TYPE OF EXAM**

2. First Trimester Obstetrics
   A. Standard Measurements (e.g., heart rate, CRL, MSD)
   B. Maternal Anatomy
      1. uterus
      2. cervix
      3. adnexa
      4. ovaries (corpus luteum)
   C. Embryonic Anatomy and Physiology
      1. fetal number
      2. gestational age
      3. gestational sac
      4. decidual layer
      5. amnion
      6. chorion
      7. yolk sac
      8. embryonic pole
      9. cardiac activity
   D. Key Abnormalities (e.g., anembryonic pregnancy, spontaneous abortion, ectopic pregnancy, embryonic demise)

3. Second/Third Trimester and High Risk Obstetrics
   A. Standard Measurements (e.g., BPD, HC, AC, FL)
   B. Maternal Anatomy
      1. uterus
      2. cervix
      3. ovaries
   C. Fetal Anatomy and Physiology
      1. fetal number
      2. position, presentation and lie
      3. gestational age and weight
      4. amniotic fluid volume
      5. cord
      6. placenta
      7. cardiac activity
      8. anatomic systems visualized
         (e.g., GI, CNS, cardiovascular)
      9. nuchal fold
   D. Chromosomal Abnormalities
      (e.g., trisomies, triploidy)
   E. Genetic Abnormalities (e.g., polycystic kidney disease, skeletal dysplasias)
   F. Infection (e.g., TORCH)

**FOCUS OF QUESTIONS**

Practice Guidelines (e.g., AIUM, ACR)
- clinical indications
- patient preparation
- patient positioning
- instrumentation (e.g., transducer, stand-off pads)
- technical factors
- evaluation and documentation of visualized anatomy
- optimizing image quality

Anatomy and Physiology
- normal
- normal variant
- abnormal
- measurements

Abnormalities
- pathology
- congenital anomalies
- lab values
- differential diagnosis

Doppler Applications/Blood Flow Characteristics
- normal
- normal variant
- abnormal

(Procedures continues on the following page.)
Procedures (continued)

**TYPE OF EXAM**

3. Second/Third Trimester and High Risk Obstetrics (continued)
   
   **G. Abnormal Growth and Development** (e.g., club foot, atresia, encephaly, macrocephaly, renal agenesis, gastroschisis, VSD)
   
   **H. Neoplasm** (e.g., blastoma, teratoma)
   
   **I. Multiple Gestations** (e.g., chorionicity, amnionicity, twin-to-twin transfusion syndrome, conjoined)
   
   **J. Assisted Reproduction/Implantation**
   
   **K. Fetal Biophysical Profile**
   
   **L. Placenta** (e.g., trophoblastic disease, previa, accreta, insufficiency, abruption)
   
   **M. Amniotic Fluid** (e.g., polyhydramnios, oligohydranmios, PROM)
   
   **N. Hydrops** (immune & non-immune)
   
   **O Intrauterine Growth Restriction** (symmetric and asymmetric)
   
   **P. Umbilical Cord** (e.g., 2-vessel cord, knots, vasa previa, prolapse)
   
   **Q. Cervical Incompetence**
   
   **R. Maternal Disease and Abnormality** (e.g., diabetes, uterine anomaly)

4. Gynecology
   
   **A. Uterus**
   1. myometrium
   2. endometrium
   3. cervix
   
   **B. Adnexa**
   1. ovaries
   2. fallopian tubes
   3. para-ovarian structures
   4. pelvic varices
   
   **C. Cul-de-Sac**
   
   **D. Vagina**
   
   **E. Pelvic Floor**

**FOCUS OF QUESTIONS**

- **Practice Guidelines** (e.g., AIUM, ACR)
  - clinical indications
  - patient preparation
  - patient positioning

  - normal
  - normal variant
  - abnormal
  - measurements

(Procedures continues on the following page.)
Procedures (continued)

TYPE OF EXAM

5. Superficial Structures and Other Sonographic Procedures
   A. Neck
      1. thyroid
      2. parathyroid
      3. salivary glands/parotid glands
      4. lymph nodes
   B. Scrotum and Testes
   C. Breasts/Axilla
   D. Vascular Exams
      1. venous extremity Doppler
         (lower and upper)
      2. carotid Doppler
      3. post catheterization complications
   E. Pediatric Exams
      1. neonatal (head, spine, hips)
      2. gastrointestinal tract (e.g., appendix,
         pylorus, intussusceptions)
      3. abdomen/adrenal/renal
   F. Ultrasound Guided Interventional Procedures (e.g., fine needle aspiration,
      biopsy, catheter placement, paracentesis,
      thoracentesis, intraoperative)
   G. Miscellaneous
      1. musculoskeletal
      2. superficial masses
      3. noncardiac chest (e.g., pleural space,
         lung)
      4. abdominal wall
